[Excel 2013 For Mac Formula List](#)

# CHOOSE function

*Applies To: Excel for Office 365, Excel for Office 365 for Mac, Excel 2016, Excel 2013, More...*

This article describes the formula syntax and usage of the **CHOOSE** function in Microsoft Excel.

## Description

Uses index_num to return a value from the list of value arguments. Use CHOOSE to select one of up to 254 values based on the index number. For example, if value1 through value7 are the days of the week, CHOOSE returns one of the days when a number between 1 and 7 is used as index_num.

## Syntax

CHOOSE(index_num, value1, [value2], ...)

The CHOOSE function syntax has the following arguments:

- **Index_num**    Required. Specifies which value argument is selected. Index_num must be a number between 1 and 254, or a formula or reference to a cell containing a number between 1 and 254.

    - If index_num is 1, CHOOSE returns value1; if it is 2, CHOOSE returns value2; and so on.

    - If index_num is less than 1 or greater than the number of the last value in the list, CHOOSE returns the #VALUE! error value.

    - If index_num is a fraction, it is truncated to the lowest integer before being used.

- **Value1, value2, ...**    Value 1 is required, subsequent values are optional. 1 to 254 value arguments from which CHOOSE selects a value or an action to perform based on index_num. The arguments can be numbers, cell references, defined names, formulas, functions, or text.

Probably not the best plan I guess I will have to look into augmenting SharePoint with a javascript function to create and stream the iqy file regardless of browser or client configuration.. Thanks Trevor! On the mac the Export to Excel ribbon item is not disabled, so the check would have to be after the keypress as opposed to when displaying the ribbon or first logging into sharepoint.
